STAT

SUBJECT : 1100/84 Configuration Update

The attached 2 Diagrams are updates to the 1100/84 configuration document dated 2 September 1981. This update was necessary in order for the diagrams to correspond with the physical switch positions as connected by the UNIVAC customer engineers. In addition, the switches have been numbered on the diagrams. These numbers are being referred to in operating instructions.

PAGE

TAPE UNIT FOR SIP IS NOT AVAILABLE - CONTINUE YN
TAPE UNIT FOR I/O IS NOT AVAILABLE - CONTINUE YN

(Table 3-17)

This message indicates that SIP is configured to tape (SBFILE = 1) and a tape drive is not available.

TAPE UNIT NOT AVAILABLE - ANS GO

(Figure 12-4)

Displayed when there is not an available tape unit.

An answer of N will cause backout from SIP initialization.

Removal of the reason for failure, followed by answer Y to the message, should produce a successful SIP/Trace initialization.

site-id TERMINATING

(Table 3-4)

Displayed in response to an UR *site-id* keyin. Indicates that the specified *site-id* is terminating.

sname TERMINATING

(Table 3-4)

Displayed in response to an UR *sname* keyin. Indicates that the specified remote device is terminating.

THE DEVICE REQUESTED CANNOT BE FOUND IN THE MCT

(11.10)

This message indicates a probable configuration problem during a boot attempt.

THE DISK PACK DOES NOT HAVE A VOL1 RECORD

(11.3)

Indicates the disk pack does not have a vol1 record.

THE EQUIPMENT SPECIFIED IS UNDEFINED IN AACONFIG

(11.10)

This message indicates a probable configuration problem during a boot attempt.

THERE ARE *nnn* ADDITIONAL INCORRECT SAU POSITIONS

(4.8)

Displayed if the allowed number status messages have gone to the operator display console.

THERE IS NO CHAIN FOR EQUIPMENT CODE

(11.10)

This message indicates a probable configuration problem during a boot attempt.

THE SYSTEM DISK PACK IS NOT A DRS PACK
DO YOU WANT TO SELECT A NEW DEVICE? RESPOND Y OR N

(11.3)

Before the EXEC is copied to the disk, the label of the pack is read to verify that it has been properly prepped. If the pack is not a DRS pack, the above message is displayed.

TIMEOUT AEQT

(Table 7-4)

Processor has not received response from last function for six seconds.

C/SP CONFIGURATION

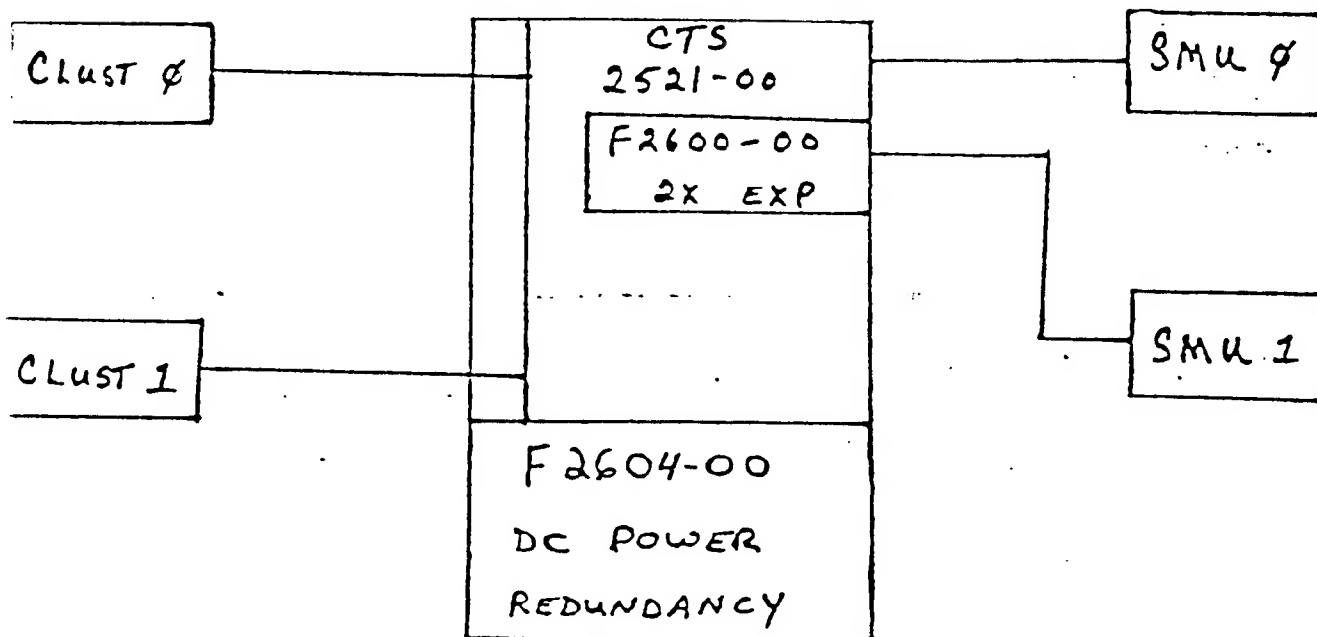

TAPE CONTROL UNITS

SYSTEM MAINTENANCE UNITS

September 2, 1981

MEMORANDUM FOR: CHIEF, SPS

FROM: [REDACTED]

STAT

SUBJECT: 1100/84 Configuration

The attached document is the revised 1100/84 configuration. The following changes have been made since the previous release of this document (Aug 20, 1981).

1. The control unit names are changed to match the names used in the "SYSGEN".
2. The position of the current CACHE-DISK subsystem was changed. It is now named "DCA0" and "DCA1"
3. Two new diagrams have been added:
 - a. MULTI-ACCESS SUBSYSTEMS - This indicates the positioning of "word-channel-module" devices on the SAU
 - b. BCTS SUBSYSTEMS - This diagram shows the positioning of "BYTE-MUX" and "BLOCK-MUX" devices on the SAU
